

DHKHONI Executive Sales Intelligence Dashboard

Professional Business Intelligence Report | Power BI Dashboard Analysis

This report provides a comprehensive analysis of DHKHONI Perfumes' business performance through an interactive Power BI dashboard. The dashboard evaluates revenue growth, profitability, customer satisfaction, operational expenses, regional sales performance, and product category trends to support strategic business decisions.

Key Performance Indicators (KPIs)

Metric	Value
Total Revenue	SAR 78 Million
Total Profit	SAR 25 Million
Total Cost	SAR 53 Million
Profit Margin	32.21%
Units Sold	150K Units
Monthly Growth	3.68%
Average Customer Rating	3.75 / 5
Total Discount	SAR 748K

Revenue Analysis

The company generated more than SAR 78 million in total revenue. Jeddah and Taif recorded the highest sales performance, while Riyadh showed lower revenue contribution compared to other major cities.

Profitability Analysis

DHKHONI achieved a strong profit margin of 32.21%. However, profit trends declined in recent years, indicating the impact of increasing operational expenses and logistics costs on overall profitability.

Product Category Performance

Unisex and Men Perfumes represent the highest-selling product categories, followed closely by French perfumes. The balanced category distribution indicates diversified customer preferences across the Saudi market.

Brand Contribution Analysis

Luxury brands such as Tom Ford, Dior, and YSL contributed significantly to overall profitability. These brands remain strong drivers of premium sales growth.

Operational Cost Analysis

Warehouse and Delivery departments account for the highest operational salary expenses. This highlights opportunities to improve logistics efficiency and optimize supply chain operations.

Customer Satisfaction

The average customer rating reached 3.75 out of 5, reflecting moderate customer satisfaction. Improvements in customer support and delivery experience may increase retention and loyalty.

Strategic Recommendations

Optimize logistics and warehouse operations to reduce operational costs. Increase marketing efforts in underperforming cities such as Riyadh. Focus on high-performing luxury brands and premium products. Reduce excessive discount strategies to improve profit margins. Enhance customer satisfaction through faster delivery and improved support services. Implement advanced KPIs such as customer retention and

sales forecasting.

Conclusion

The DHKHONI Executive Sales Intelligence Dashboard provides valuable insights into the company's sales performance, profitability, customer behavior, and operational efficiency. The analysis demonstrates strong revenue growth and market demand while identifying opportunities for cost optimization and business expansion. This dashboard supports data-driven decision-making and strategic planning for sustainable business growth.
